11 TOXICOLOGICAL INFORMATION

11.1 Information on toxicological effects

Acute toxicity

Based on available data, the classification criteria are not met.

LD/LC 50 values that are relevant for classification:

7664-93-9 sulphuric acid

 $\begin{array}{lll} \text{Oral} & \text{LD50} & \text{2140 mg/kg (rat)} \\ \text{Inhalative} & \text{LC50/4 h} & \text{0.375 mg/L (rat)} \end{array}$

(aerosol)

Although the LC50 values from the inhalation toxicity study theoretically trigger Classification with 'Toxic by inhalation', classification is not proposed. The effects of sulphuric acid following inhalation are entirely due to local irritation of the respiratory tract: there is no evidence for the systemic toxicity of sulphuric acid in any study as effects are limited to the site of contact. Classification for acute inhalation toxicity is not considered to be appropriate.

<u>Skin corrosion/irritation</u> May cause irritation to the skin. <u>Serious eye damage/irritation</u> May cause irritation to the eyes.

Respiratory or skin sensitization
Additional toxicological information:

After swallowing: irritations of mucous membranes in the

mouth, pharynx, oesophagus and gastrointestinal tract

Germ cell mutagenicityBased on available data, the classification criteria are not met.CarcinogenicityBased on available data, the classification criteria are not met.Reproductive toxicityBased on available data, the classification criteria are not met.STOT-single exposureBased on available data, the classification criteria are not met.STOT-repeated exposureBased on available data, the classification criteria are not met.
